 **Hundegger**

Hundegger TURBO-Drive. It's all about speed and versatility.

Cutting without measuring or set-up

We know how seriously you take your business. That's why we're just as passionate about ours. Hundegger is the world's leading manufacturer of Wood Component equipment. From post and beam timbers to webs and chords we build our machines for durable performance that exceeds the expectations of the wood construction market. We introduce innovations aimed specifically at reducing your costs and maximizing your throughput. Our products are built to provide solutions for all types and sizes of components and we are backed by the commitment to exceed expectations in service and support.

To achieve maximum throughput, you need maximum performance. The TURBO-Drive machine is the perfect solution when speed and versatility are required. We continue to provide innovative options including basic drilling, milling and printing operations like nothing else on the market.

As opposed to alternative solutions, the TURBO-Drive saw blade is able to move below the zero line and to a 90° bevel, making it possible to cut horizontal and at an angle.

For even more Versatility

The TURBO-Drive can be equipped with up to two optional vertical mill units.

Options include either a 7.5 kW milling and drilling unit for milling recesses or profiles as well as a 2.2 kW drill unit.

These vertical mill can help process unique milling operations on single parts or on stacked parts.

For identification and marking of the finished parts, the TURBO-Drive can be installed with an inkjet marking system as well as marking pen or a label printer options.

From a simple lay-out lines to multiline text or bar codes, most all marking options are available and can be added.

Data can be transferred directly into the TURBO-Drive software from most design software's.

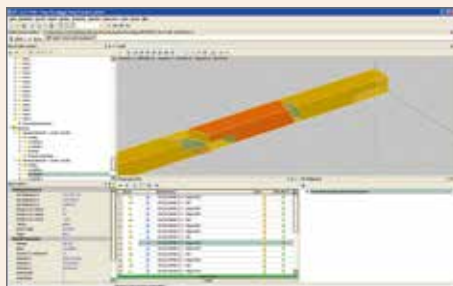

Every component manufacturer needs equipment that can be trusted for long-lasting performance. But it must get jobs done on time and on budget. For maximum throughput the automation of the TURBO-Drive can be further enhanced with an In-feed system. The user can place several boards on the loading conveyor. These boards are then automatically fed to the TURBO-Drive and through the machine accurately and efficiently. Such ease of use means the operator can concentrate on other tasks while the machine takes care of the processing. A cross conveyor system is available at the out feed of the machine for collecting and sorting the finished parts.

CAMBIUM

made by Hundegger

One software package for all machines and for all tasks

The element that connects all Hundegger machines is CAMBIUM, the completely new software developed by Hundegger. With CAMBIUM, the entire production process from design, through job preparation, right up to the finished part is mapped using a single software package.

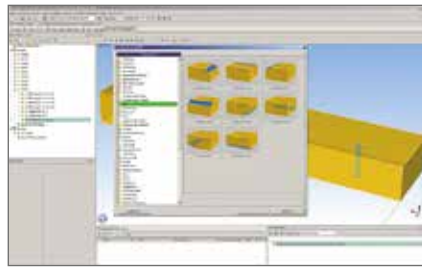

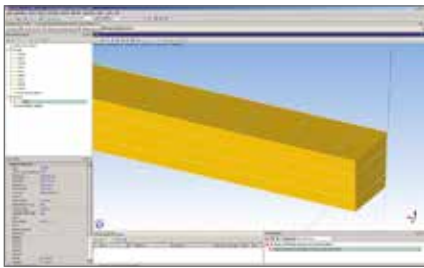

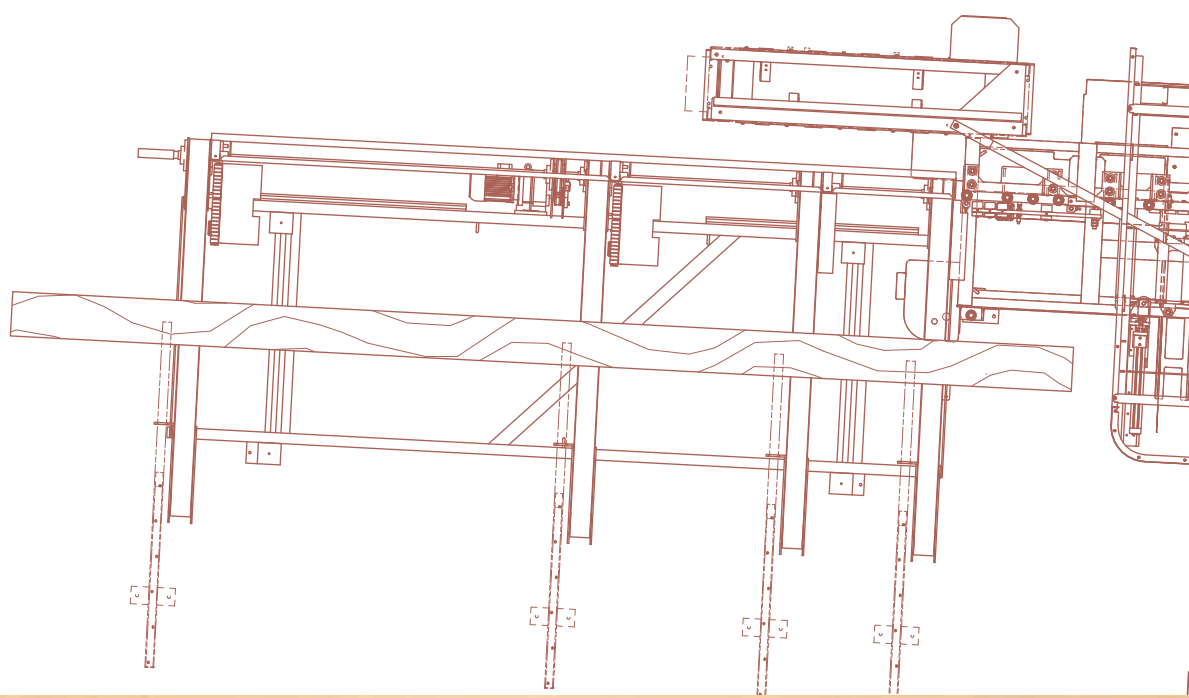

This makes interface problems a thing of the past and also completely eliminates the need for additional training as well as the high costs associated with the acquisition and maintenance of multiple systems.

CAMBIUM has been developed specially for the demands of modern timber construction – this ensures maximum investment security

along with extremely simple operation.

CAMBIUM is truly flexible and fully automatic. No matter what your processing variant may be, CAMBIUM provides an effective and reliable solution for any task without the need for additional programming.

Free software updates ensure that you benefit from continuous dynamic further development of the software throughout the service life of the machine.

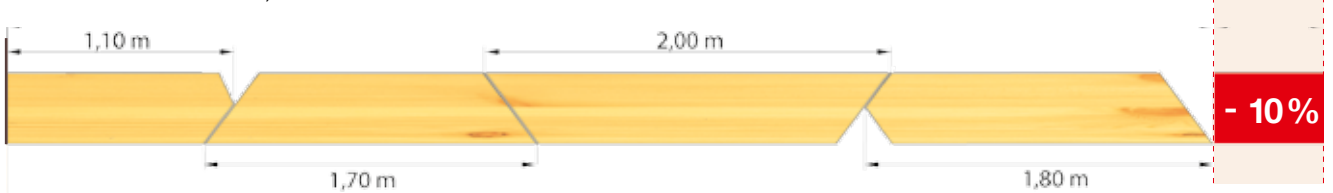

Board stretcher

cutting-edge technology and unmatched efficiency

Without Board stretcher 6,60 m

With Board stretcher 6,00 m

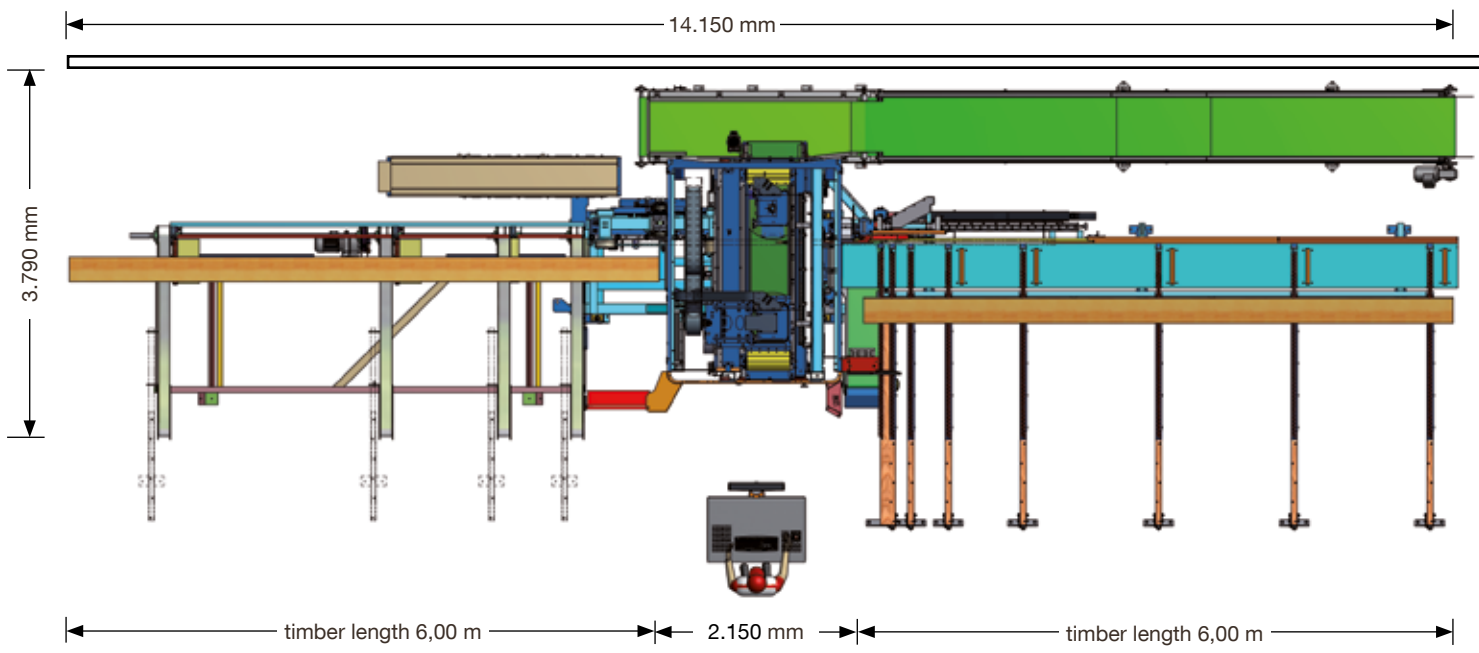

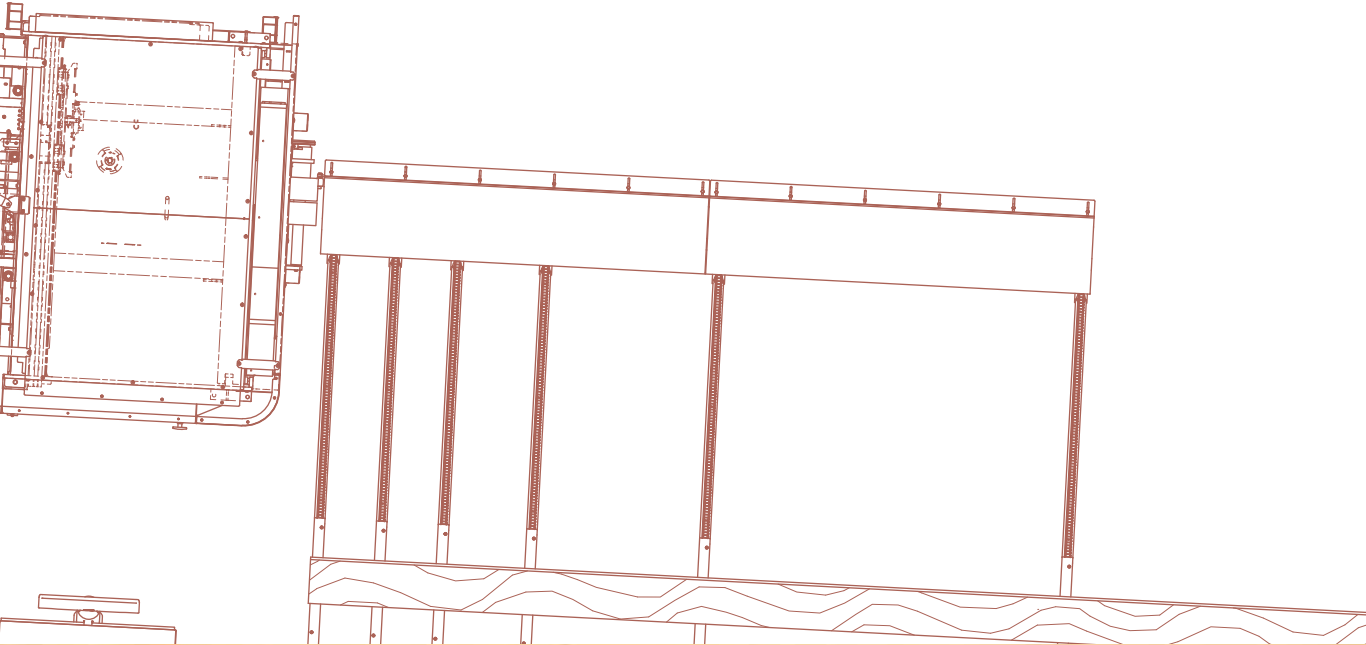

Less timber consumption
= more benefit

Hundegger TURBO-Drive.

Hundegger equipment has always paid for itself.

Now it just takes less time.

About the specifications in this prospectus: All specifications are subject to change. The images shown may contain accessories or special equipment which is not included in the standard scope of delivery. Images may have also been changed to not include all standard safety equipment.

Hundegger – Advantages

- Experience from more than 4700 machines installed worldwide
- Precise adaptation of the machines to the requirements of the customer thanks to the modular system and expert advice
- High degree of flexibility owing to in-house software development
- Continuous further development and free software updates
- State-of-the-art interface compatible with all leading timber construction AD programs
- Convenient machine operation specially developed for the demands of timber construction
- Qualified training and courses at the Hundegger training centre
- Close cooperation with leading institutes and colleges, particularly with regard to vocational further education
- Extensive warranties
- Service and spare parts availability guaranteed worldwide
- Round-the-clock service as a cornerstone of Hundegger's corporate philosophy
- Unrivalled price/performance ratio
