WOODWORKING MACHINERY

Le lavorazioni meccaniche sono eseguite internamente mediante un rilevante parco macchine utensili e centri di lavoro a controllo numerico. Diverse linee di montaggio efficienti e flessibili assicurano una rapida consegna del prodotto finito. Esiste inoltre un vasto indotto di terzisti ed aziende collaterali cui è decentrata una parte delle lavorazioni meccaniche e la produzione di componentistica sia meccanica, elettro-pneumatica che elettronica. Il livello di affidabilità del nostro prodotto è curato nei minimi dettagli dai nostri tecnici del controllo qualità.

Most mechanical workings are carried out internally by means of a wide range of machine tools and CNC working centres. Several efficient, flexible assembly lines ensure quick delivery time of finished products. A wide group of selected co-operating firms is also performing a part of mechanical workings and producing mechanical, electro-pneumatic and electronic components as well. A careful staff for quality control takes care of product reliability in all its details.

prodotti products

La gamma dei prodotti della Steton è vasta ed articolata e si estende dalle macchine classiche per falegnameria ad impianti speciali ad alta tecnologia. Integrando la propria produzione con macchine complementari, la Steton Spa offre oggi alla propria clientela studio e realizzazione di impianti completi per la produzione di mobili, porte, finestre, parquet ecc.

Steton's production range is wide and articulated. It ranges from standard machines for joinery to special hi-tech plants. By means of an integration of its production with additional machines Steton is able to offer both the development and the execution of complete plants for furniture, doors, windows, parquet etc.
